IDENTITY AND AUTHENTICATION

Chad Spensky Allthenticate

WHO AM !?

WHO AM !?

Chad Spensky (Professional)

- Ph.D. Student
- Computer Security Researcher
- Founder of Allthenticate

My password is in the past.

Chad Spensky (Social)

- Beach Volleyball Player
- Country Music Enthusiast
- Fried Chicken Connoisseur

WHO AM !?

My password is in the past.

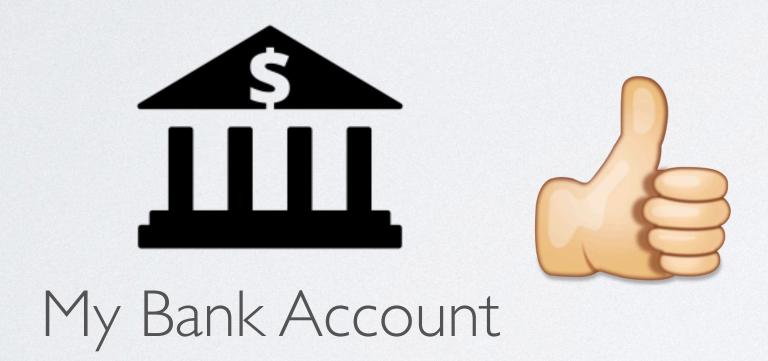

- Shortman (Online)
 - Hacker
 - CTF Player
 - You?

WHO AM !?

THE PROBLEM

I should have access to some things, and not others

THE PROBLEM

My E-mail

THE PROBLEM

THE PROBLEM

Convincing a digital entity that I am me

My password is in the past.

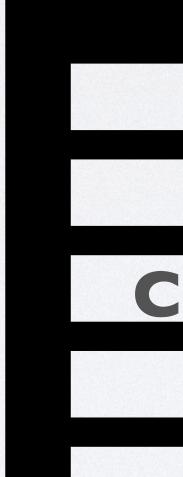

Convincing a digital entity that I am me authorized

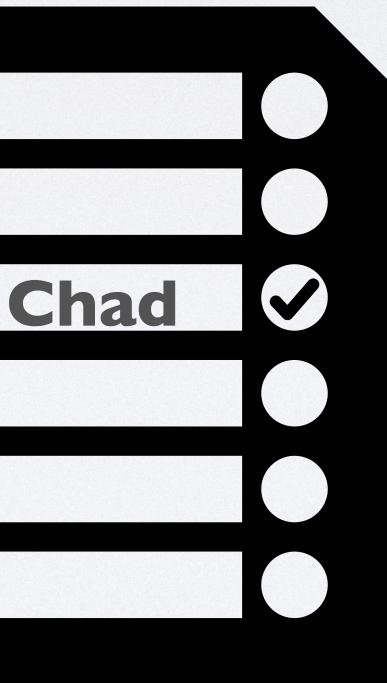

My password is in the past.

Only permitting authorized users to access a resource

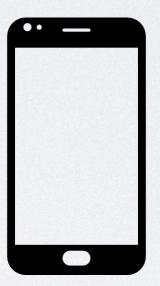

Real World

Digital World

What you know

• What you have

• What you are

WHATYOU KNOW

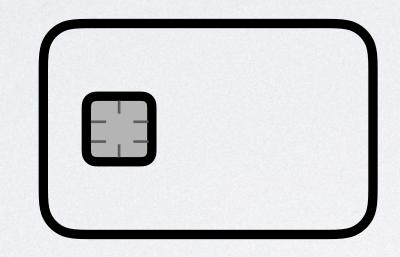

A Secret

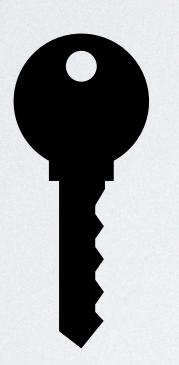

Personal Details

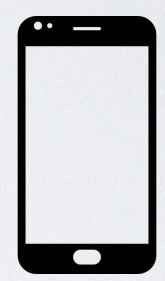

5

WHATYOU HAVE

WHAT YOU ARE

25 õ

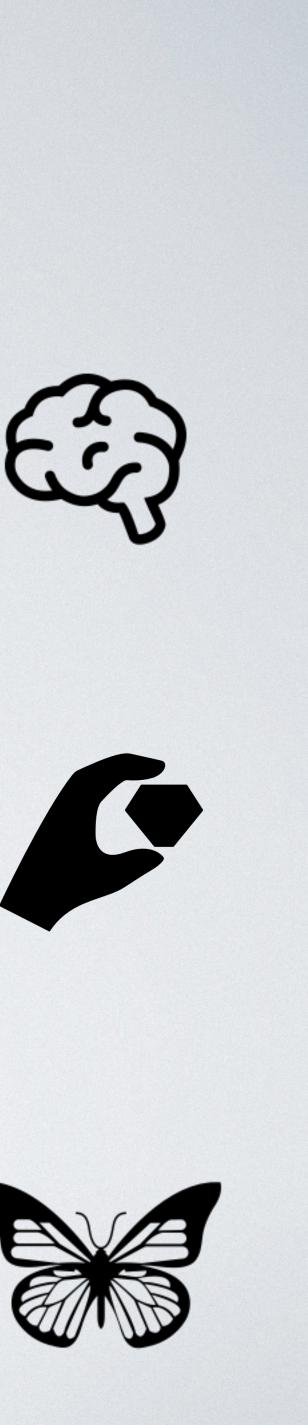

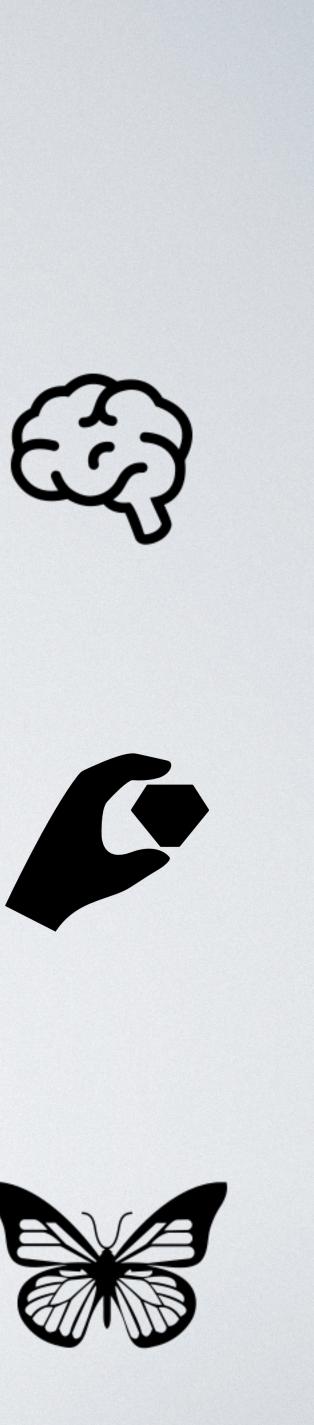

• Know: Always with you

• Have: No mental burden

• Are: Just be yourself

THE GOOD

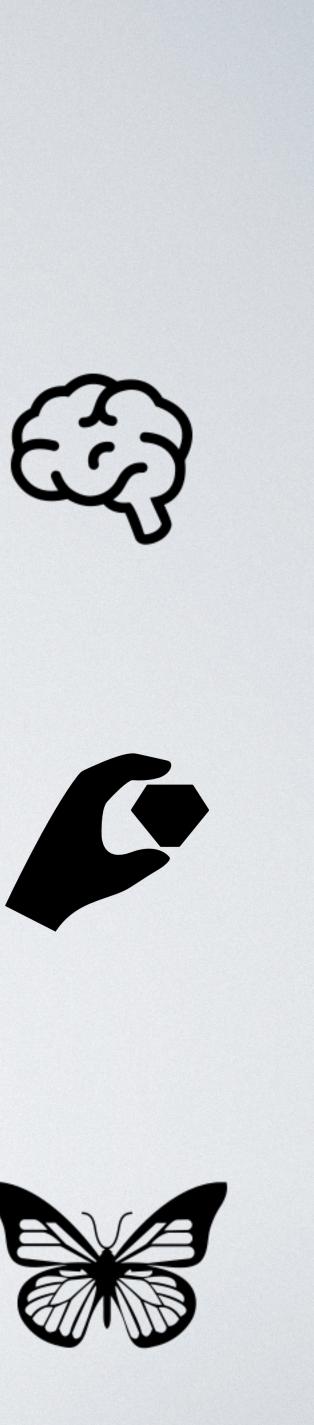

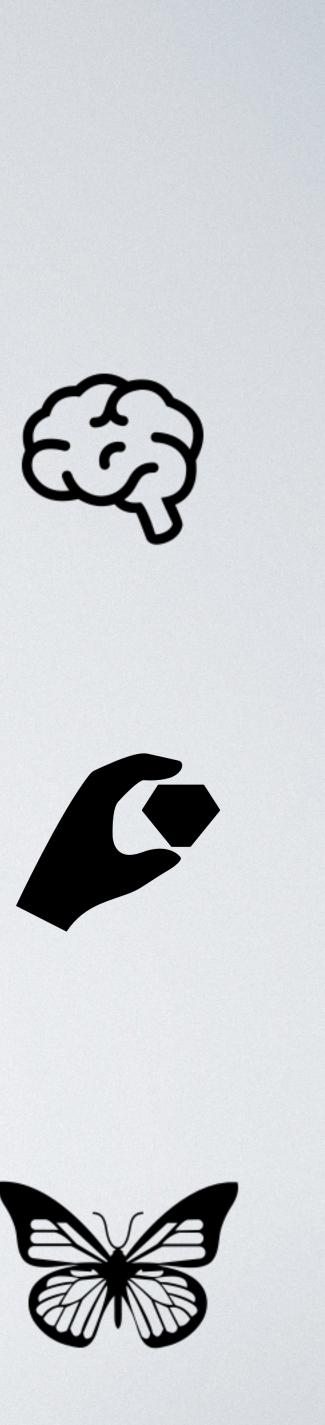

Know: You must remember it. always. •

• Have: You must always have it.

• Are: What if you temporarily change? (e.g., cold or injury)

THE BAD

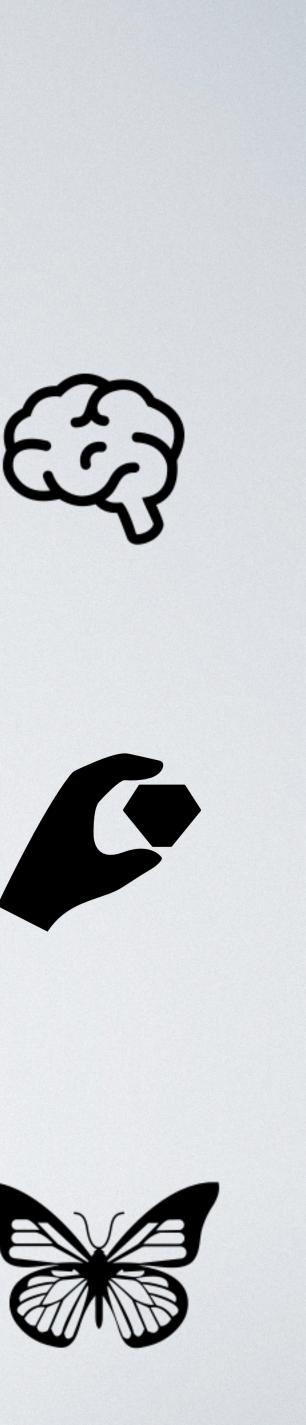

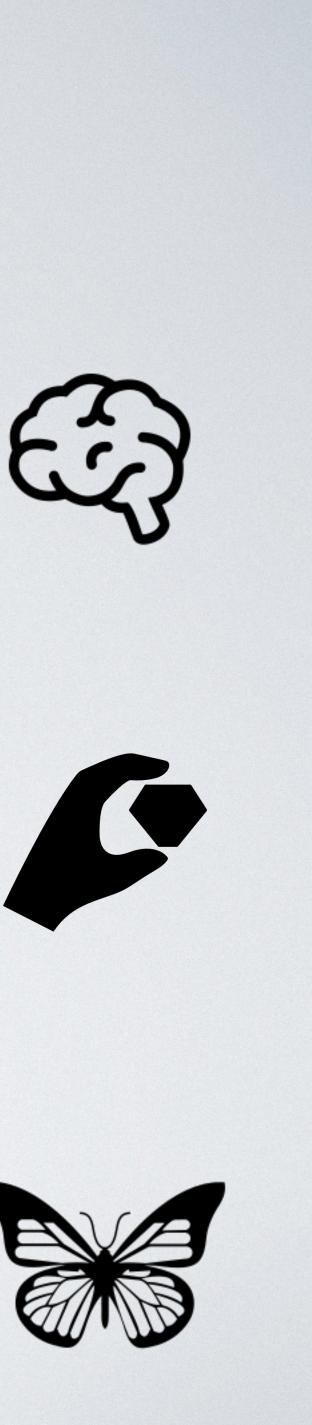

Know: You must be better than a computer. •

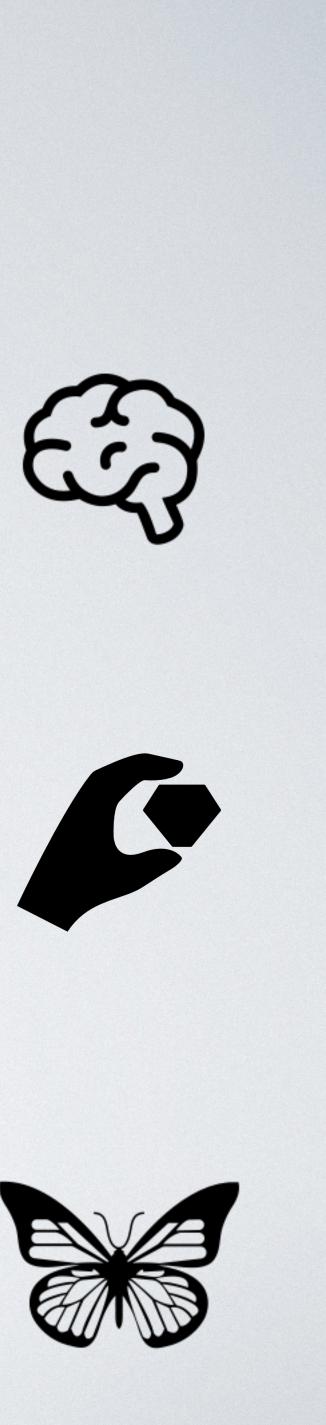

• Have: What if it gets stolen?

• Are: You can never share or revoke who you are.

THE UGLY

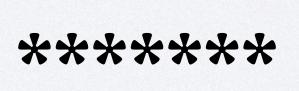

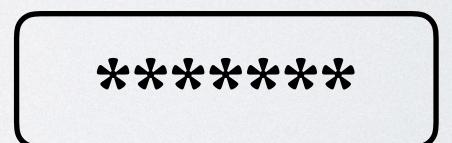

}	Type a name to identify yourself to Windows. Enter a password if you want to. Tip: If you don't enter a password, you won't get this premet again at startup.	OK Cancel	
	prompt again at startup. User name:		
	Password:		

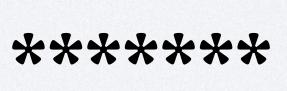

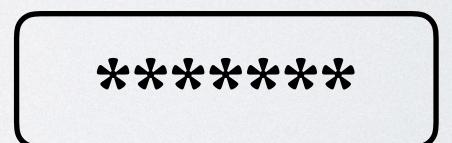

1990s

?	Type a name to identify yourself to Windows. Enter a password if you want to. Tip: If you don't enter a password, you won't get this prompt again at startup.	OK Cancel
	User name:	
	Password:	

1990s

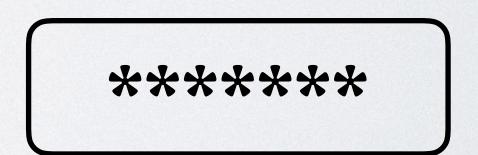

}	Type a name to identify yourself to Windows. Enter a password if you want to. Tip: If you don't enter a password, you won't get this prompt again at startup.	OK Cancel
	User name: Password:	

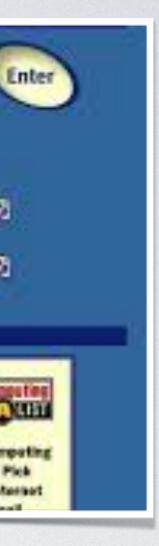

1990s

}	Type a name to identify yourself to Windows. Enter a password if you want to. Tip: If you don't enter a password, you won't get this prompt again at startup.	OK Cancel
	User name: Password:	

1990s

Attackers were blinding guessing or cracking offline credentials

Stronger passwords are harder to guess/crack

1990s

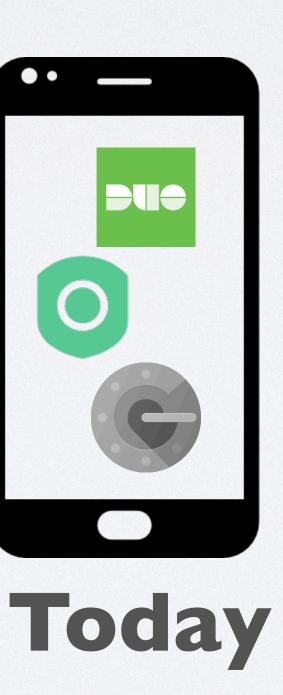

More than 15 usernames

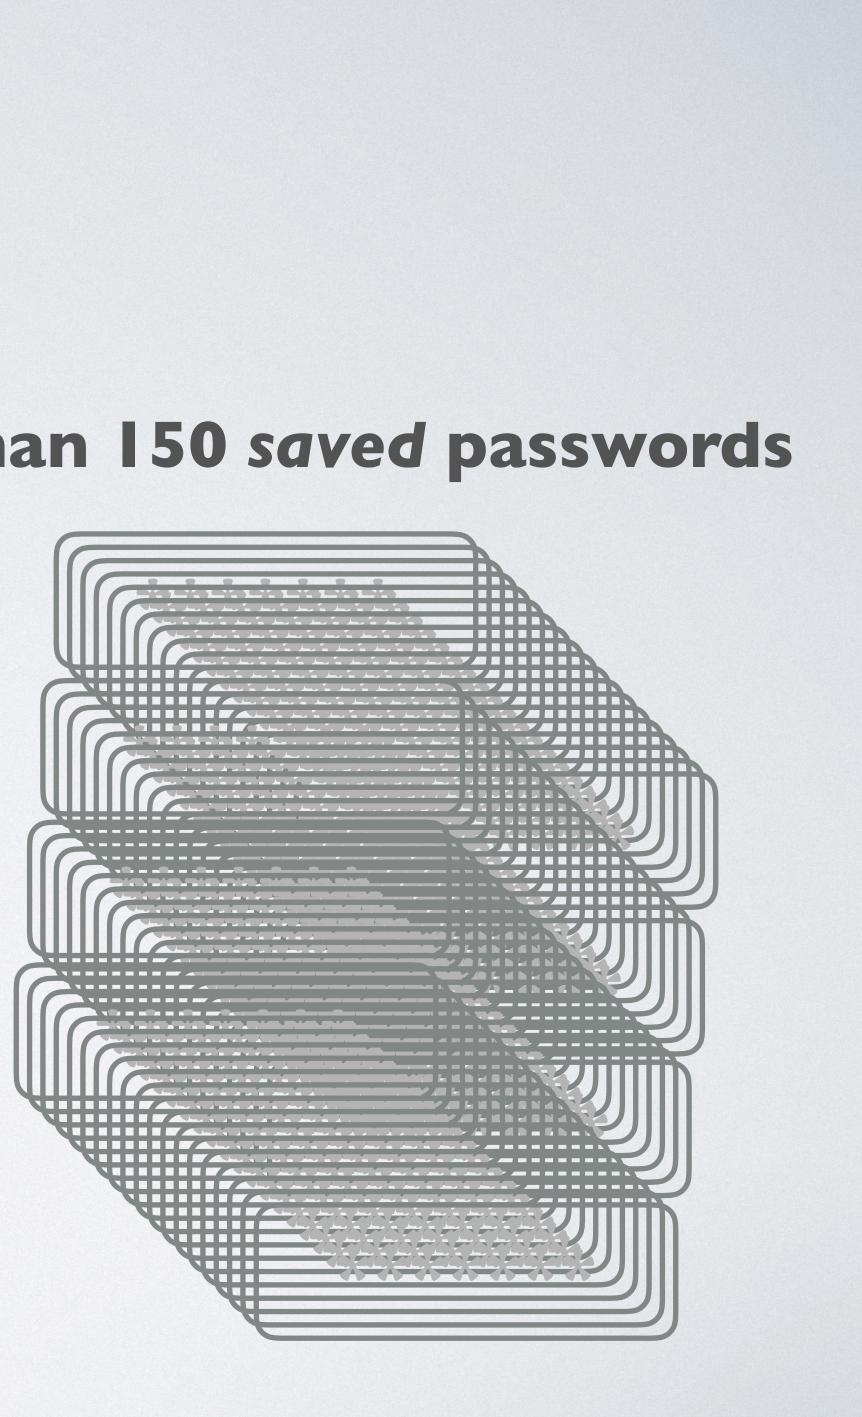

cspensky@ucsb.edu cspensky@gmail.com cspensky@mit.edu chad@allthenticate.net cspensky@cs.ucsb.edu chad@cspensky.info cspensky@unc.edu cspensky@alumni.pitt.edu chad.spensky@ll.mit.edu cspensky@comcast.net cspensky@alumni.unc.edu

PASSWORDS

More than 150 saved passwords

3 dedicate apps

- Attackers are phishing users to steal the credential outright
- Password strength is completely irrelevant

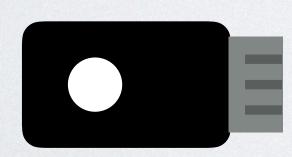

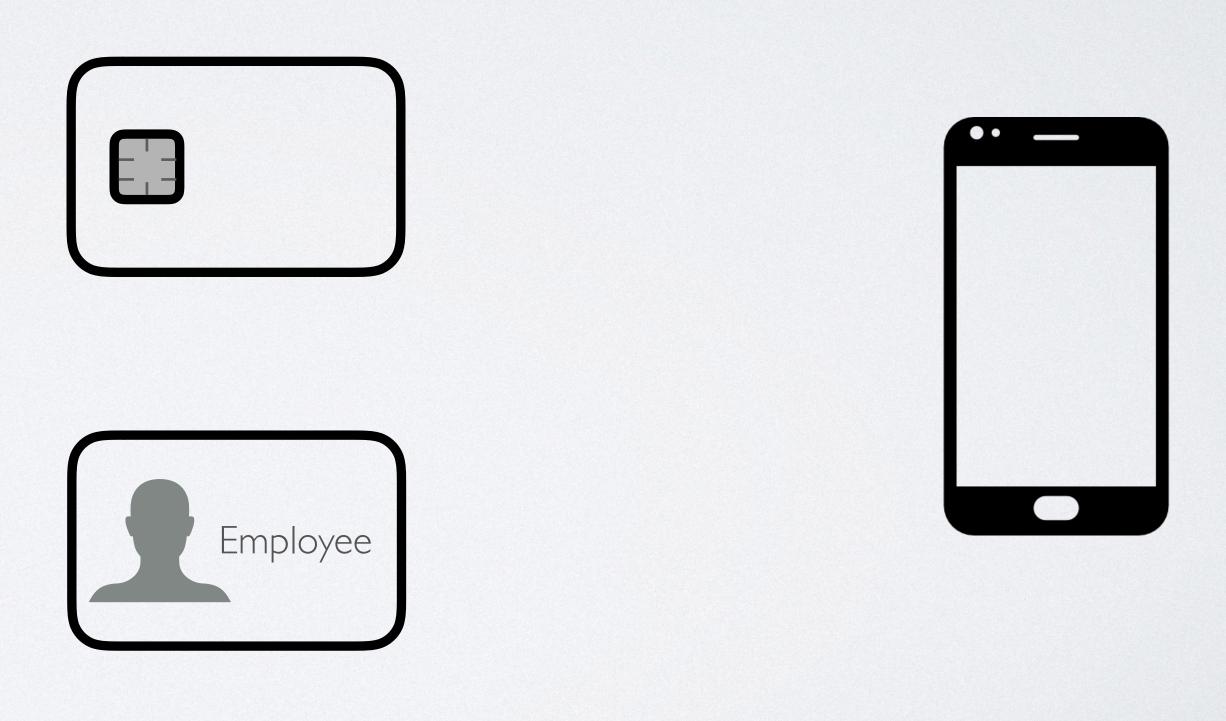

HARDWARETOKENS

Second Factor

Hardware Credential Portable Computer

HARDWARETOKENS

- Attackers can still phish second factors
- Most hardware credentials can be outright stolen

BIOMETRICS

Fingerprint Voice

Voice Recognition

FaceID

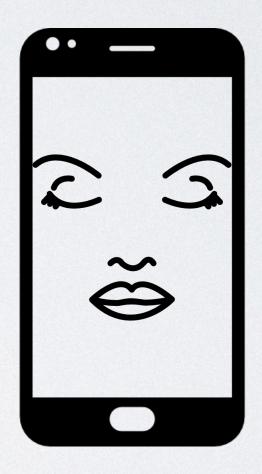

BIOMETRICS

Fingerprint Voice Recognition

BIOMETRICS

- Easily accessible (e.g., pictures, recordings, or fingerprints)
- Once replicated, are gone forever

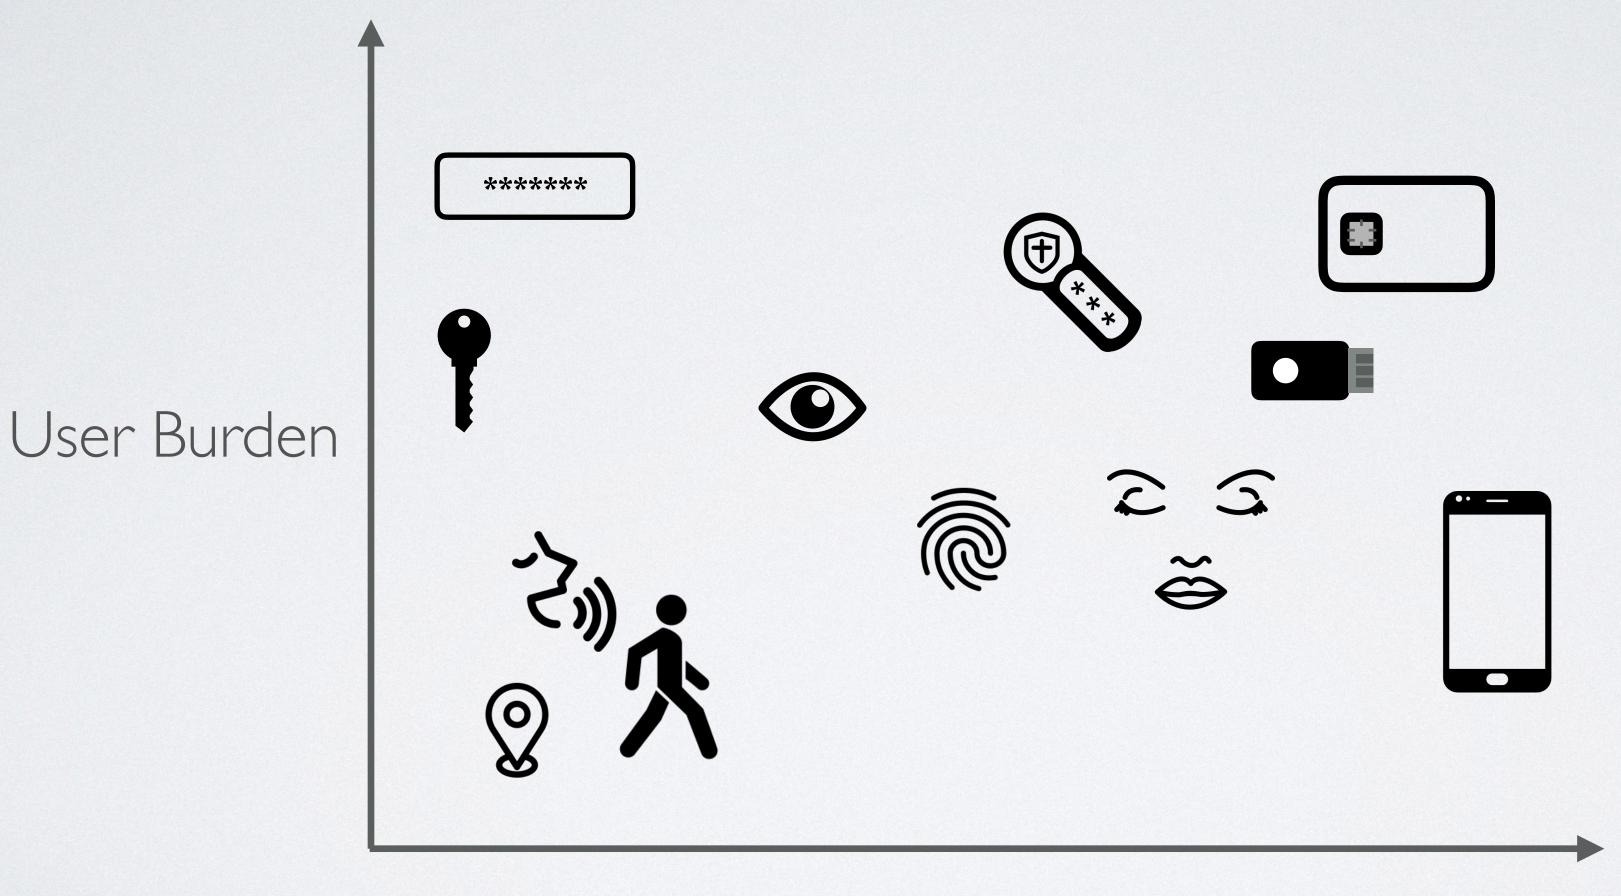

Value of Asset

Security Requirements

User Burden

Security

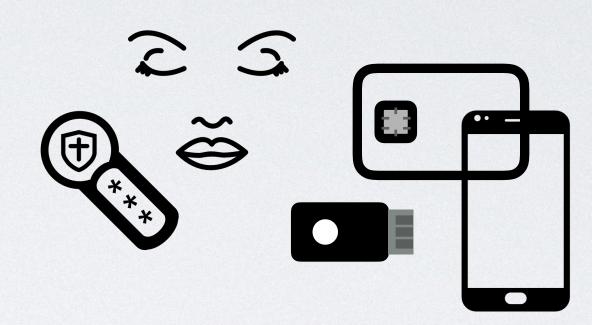

Security

Implementation Cost

Security

Implementation Cost

FINDING THE RIGHT FIT

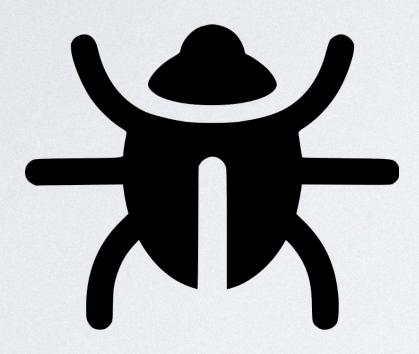

THE PROBLEM

There are too many options

MORE IS NOT BETTER

More bugs

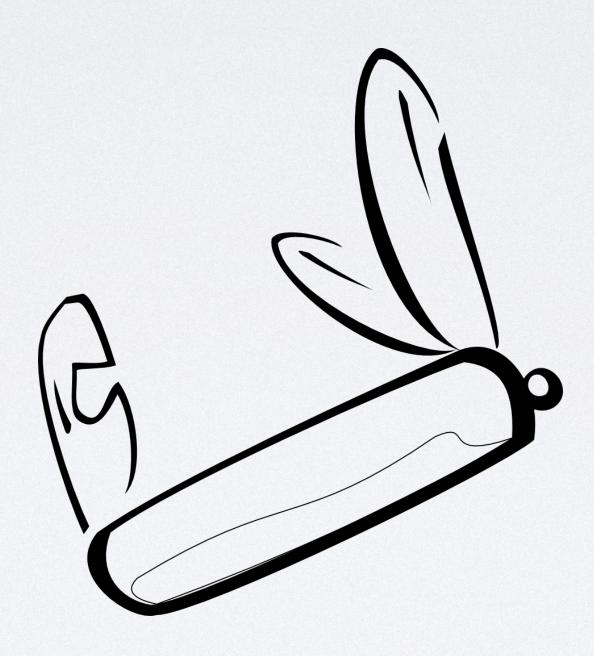

More user burden

More overhead

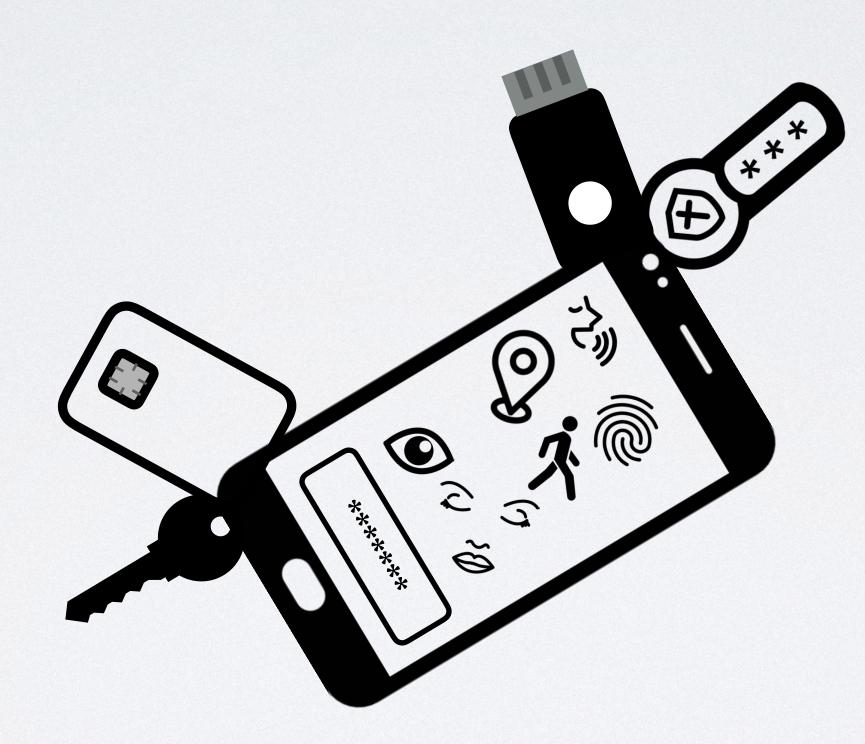

WE NEED FLEXIBILITY

WE NEED FLEXIBILITY

MORE SECURITY. LESS BURDEN.
